CREW  
FORECAST  
Crew Legality Solution

ProVerne 

## Overview

ProVerne Solutions has created the industry-leading tool for monitoring – and managing – Crew Legality. Designed to work with most of the popular Crew Management Systems (e.g. AIMS, Sabre, Net Line, etc.), Crew Forecast gives you clean, exceptions-based dashboards that are tailored to your airline's policies and processes.

Crew Forecast is designed to work with any regulatory framework (e.g. FAA 117/121, EASA, Indian DGCA, etc.) and can be deployed quickly. Completely cloud-hosted and browser-based, Crew Forecast lets you look into the future and manage potential disruptions long before they become an issue.

ProVerne's unique implementation approach lets you design workflows, tailor dashboards and generate customized reports so that accurate information is distributed in near real-time. Completely web-based, ProVerne's cloud solution follows our unique design standard that requires minimal to no training to get started.

## Features

### Easy integration

- Multiple integration options such as sftp, web APIs etc. depending on the Crew Management system interfaces
- Dynamic, near real-time data – not just point in time snapshots – so you always know where you are
- User-driven tolerances and buffers for:
  - ✓ Flight time limitation
  - ✓ Flight duty period: un-augmented
  - ✓ Flight duty period: Split duty
  - ✓ Flight duty period: augmented
  - ✓ Extend Flight duty period
  - ✓ Reserve status
  - ✓ Cumulative limitations
  - ✓ Rest periods
  - ✓ Consecutive nighttime ops
  - ✓ And more....

### Crew Qualifications Management

- Customizable repository for Crew Qualifications documentation

- Track medical, travel, training and other expiry dates with automated notifications

### Notifications

- Email notifications for unhandled exceptions and pending work assignments
- Email notifications for data integration with CMS

## Technology and hosting

ProVerne products are offered as Software-As-A-Service and are deployed on Amazon Web Services, allowing us to further guarantee stability and systems security.

And, unlike many SaaS solutions, ProVerne tools are device-agnostic and can be accessed through any standard web or mobile browser, eliminating roll-out/upgrade downtime, supporting Crew "Bring Your Own Device", and having NO requirement for additional software or applications to be installed.

## Implementation and Support

ProVerne's unique, rapid-prototyping implementation approach gives you a solution tailored to your organization with an amazing time-to-market. Typically, you'll see your first iteration in two weeks or less and from there we'll work closely with your team to make sure that layouts, dashboards and workflows all are optimized to your unique operation. With ProVerne, there are no surprises, and every engagement is an opportunity to exceed expectations.

ProVerne stands apart from other providers in that we are on a constant mission to ensure that you are receiving maximum value for your investment. Everything, from the application to payments and administration, is designed to reduce overhead and keep you focused on the business.

And once you're live, we continue to support you with customized SLAs based on your airline requirements, as well as a dedicated JIRA portal for reporting and tracking service issues.
